

SHOAIB HAROON RASHEED JAMADAR

Bengaluru, India | +91 9902181650 | s7oaibjamadar@gmail.com | github.com/s7oaib | linkedin.com/in/shoaib-jamadar77

PROFESSIONAL SUMMARY

AI & Machine Learning student and Quantum Computing Research Intern with hands-on experience building computer vision, multi-agent AI, and full-stack systems. Skilled in Python, TensorFlow, PyTorch, OpenCV, and React/Node.js, with proven results shipping production-style projects (real-time object detection at 30 FPS, federated learning pipelines) and a first-place hackathon win. Google Cloud Generative AI Academy trained; seeking Machine Learning Engineer / AI Engineer / Computer Vision Engineer roles.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML5, CSS3
AI / Machine Learning: TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, Random Forest, NLP, Generative AI, Federated Learning
Computer Vision: OpenCV, MediaPipe, YOLOv8, YOLOv11
Web Development: React.js, Vite, Tailwind CSS, Node.js, Express.js, Flask, FastAPI, REST APIs, JWT
Database & Cloud: MongoDB, Mongoose, ChromaDB, Google Cloud Platform, Docker, Git, Postman

EXPERIENCE

Research Intern — Quantum Computing Oct 2025 – Present
M R A Gurus Private Limited, Bengaluru, India

- Research and develop Quantum Computing concepts and applications as part of a 1-year internship program, contributing to applied research documentation and prototypes.
- Built AI automation pipelines and AI video generation workflows, reducing manual content-production time through automated task orchestration.
- Developed full-stack web applications using React.js and Node.js/Express.js, delivering end-to-end features from UI to REST API.

PROJECTS

SafeVision — AI-Powered Real-Time Crime Detection 2025
Python, YOLOv11/YOLOv8, OpenCV, FastAPI, Streamlit, Federated Learning (Flower), Opacus

- Built a real-time crime detection system with fine-tuned YOLOv11, classifying violence and weapons from CCTV feeds at 30 FPS across three threat severity levels.
- Automated evidence capture with 5-second MP4 clips and instant Telegram alerts, cutting manual review time for flagged incidents.
- Integrated Federated Learning with Differential Privacy (Flower, Opacus) to enable distributed model training while preserving data privacy across nodes.

Air Canvas — Gesture-Based Drawing Application 2025
Python, OpenCV, MediaPipe, HTML5 Canvas

- Developed a real-time gesture-controlled canvas using MediaPipe hand tracking, enabling drawing, erasing, and navigation via webcam with no physical input device.
- Implemented multi-brush sizing, undo/redo, auto-save, and PNG export, plus a live picture-in-picture camera feed with hand landmark overlay for user feedback.

P.H.O.E.N.I.X — Multi-Agent AI Desktop Assistant 2025 – Ongoing
Python, LangGraph/AutoGen, Speech Recognition, PyQt5, FastAPI, ChromaDB, Docker

- Architecting a voice-activated AI assistant with a 4-level multi-agent hierarchy (PHOENIX orchestrator → JARVIS/FRIDAY/FALCON → 9 specialist agents → dynamic sub-agents).
- Designing competitive planning via Mixture-of-Experts routing, Docker-sandboxed execution, a self-healing pipeline, and ChromaDB-backed long-term memory.

EDUCATION

B.E. — Artificial Intelligence & Machine Learning, HKBK College of Engineering, Bengaluru 2023 – 2027
Pre-University (Science: PCMB), Excellent PU College, Vijayapura — Karnataka State Board 2021 – 2023
SSLC (10th Grade), Daffodils English Medium School, Vijayapura — CBSE 2019 – 2021

ACHIEVEMENTS & HACKATHONS

- 1st Place — Nexora Hackathon, HKBK College of Engineering (Dept. of AIML): won first prize among competing teams with an AI-driven solution; led end-to-end development and presentation.

CERTIFICATIONS & TRAINING

- Google Cloud Generative AI Academy
- IEEE Quantum Computing Lecture Series
- Cybersecurity 3.0 — Fortinet
- Introduction to Data Science — Infosys
- AI for Beginners — HP Life
- MongoDB 4.0 Developer's Guide — Infosys
